

PROTECT OUR MARINE ECOSYSTEMS

WHY YOUR SUPPORT MATTERS

Australia's oceans are teeming with unique wildlife vital to our economy and way of life. However, threats like overfishing, pollution, and climate change are degrading these ecosystems.

WWF-Australia is committed to conserving marine biodiversity and ensuring sustainable use of ocean resources.

ACTIONS YOU CAN TAKE

Reduce single-use plastics to prevent ocean pollution and protect marine life.

Choose seafood from sources that follow sustainable fishing practices.

Engage in local beach and river clean-up events to help remove human made debris from marine environments.

Join campaigns to establish and enforce marine protected areas.
